

corn starch, potato starch, alginic acid, a lubricant such as magnesium stearate; and a sweetening agent such as sucrose lactose or saccharin. When a dosage unit form is a capsule, it may contain, in addition to materials of the above type, a liquid carrier such as a fatty oil.

- 5 Various other materials may be present as coatings or to modify the physical form of the dosage unit. For instance, tablets may be coated with shellac, sugar or both. A syrup or elixir may contain, in addition to the active ingredient, sucrose as a sweetening agent, methyl and propylparabens as preservatives, a dye and a flavoring such as cherry or orange flavor.
- 10 For parenteral administration the disclosed positive allosteric modulators of mGluR2 can be combined with sterile aqueous or organic media to form injectable solutions or suspensions. For example, solutions in sesame or peanut oil, aqueous propylene glycol and the like can be used, as well as aqueous solutions of water-soluble pharmaceutically-acceptable salts of the compounds. Dispersions can also be prepared
- 15 in glycerol, liquid polyethylene glycols and mixtures thereof in oils. Under ordinary conditions of storage and use, these preparations contain a preservative to prevent the growth of microorganisms.

In addition, to the formulations described previously, the compounds may also be formulated as a depot preparation. Such long acting formulations may be administered

- 20 by implantation, for example, subcutaneously or intramuscularly or by intramuscular injection. Thus, for example, as an emulsion in an acceptable oil, or ion exchange resins, or as sparingly soluble derivatives, for example, as sparingly soluble salts.

Preferably disclosed positive allosteric modulators of mGluR2 or pharmaceutical formulations containing these compounds are in unit dosage form for administration to

- 25 a mammal. The unit dosage form can be any unit dosage form known in the art including, for example, a capsule, an IV bag, a tablet, or a vial. The quantity of active ingredient in a unit dose of composition is an effective amount and may be varied according to the particular treatment involved. It may be appreciated that it may be necessary to make routine variations to the dosage depending on the age and condition
- 30 of the patient. The dosage will also depend on the route of administration which may

be by a variety of routes including oral, aerosol, rectal, transdermal, subcutaneous, intravenous, intramuscular, intraperitoneal and intranasal.

PHARMACOLOGY

- 5 The compounds provided in this invention are positive allosteric modulators of metabotropic receptors, in particular they are positive allosteric modulators of mGluR2. The compounds of the present invention do not appear to bind to the glutamate recognition site, the orthosteric ligand site, but instead to an allosteric site within the seven transmembrane region of the receptor. In the presence of glutamate or an agonist
10 of mGluR2, the compounds of this invention increase the mGluR2 response. The compounds provided in this invention are expected to have their effect at mGluR2 by virtue of their ability to increase the response of such receptors to glutamate or mGluR2 agonists, enhancing the response of the receptor. Hence, the present invention relates to a compound for use as a medicine, as well as to the use of a compound according to
15 the invention or a pharmaceutical composition according to the invention for the manufacture of a medicament for treating or preventing a condition in a mammal, including a human, the treatment or prevention of which is affected or facilitated by the neuromodulatory effect of mGluR2 allosteric modulators, in particular positive mGluR2 allosteric modulators.
- 20 Also, the present invention relates to the use of a compound according to the invention or a pharmaceutical composition according to the invention for the manufacture of a medicament for treating, or preventing, ameliorating, controlling or reducing the risk of various neurological and psychiatric disorders associated with glutamate dysfunction in a mammal, including a human, the treatment or prevention of which is affected or
25 facilitated by the neuromodulatory effect of mGluR2 positive allosteric modulators.

Where the invention is said to relate to the use of a compound or composition according to the invention for the manufacture of a medicament for e.g. the treatment of a mammal, it is understood that such use is to be interpreted in certain jurisdictions as a method of e.g. treatment of a mammal, comprising administering to a mammal in
30 need of such e.g. a treatment, an effective amount of a compound or composition according to the invention.

In particular, the neurological and psychiatric disorders associated with glutamate dysfunction, include one or more of the following conditions or diseases: acute neurological and psychiatric disorders such as cerebral deficits subsequent to cardiac bypass surgery and grafting, stroke, cerebral ischemia, spinal cord trauma, head trauma,
5 perinatal hypoxia, cardiac arrest, hypoglycemic neuronal damage, dementia (including AIDS-induced dementia), Alzheimer's disease, Huntington's Chorea, amyotrophic lateral sclerosis, ocular damage, retinopathy, cognitive disorders, idiopathic and drug-induced Parkinson's disease, muscular spasms and disorders associated with muscular spasticity including tremors, epilepsy, convulsions, migraine (including migraine headache), urinary incontinence, substance tolerance, substance withdrawal (including substances such as opiates, nicotine, tobacco products, alcohol, benzodiazepines, cocaine, sedatives, hypnotics, etc.), psychosis, schizophrenia, anxiety (including generalized anxiety disorder, panic disorder, and obsessive compulsive disorder), mood disorders (including depression, mania, bipolar disorders), trigeminal neuralgia, hearing
10 loss, tinnitus, macular degeneration of the eye, emesis, brain edema, pain (including acute and chronic states, severe pain, intractable pain, neuropathic pain, and post-traumatic pain), tardive dyskinesia, sleep disorders (including narcolepsy), attention deficit/hyperactivity disorder, and conduct disorder.
15

In particular, the condition or disease is a central nervous system disorder selected from
20 the group of anxiety disorders, psychotic disorders, personality disorders, substance-related disorders, eating disorders, mood disorders, migraine, epilepsy or convulsive disorders, childhood disorders, cognitive disorders, neurodegeneration, neurotoxicity and ischemia.

Preferably, the central nervous system disorder is an anxiety disorder, selected from the
25 group of agoraphobia, generalized anxiety disorder (GAD), obsessive-compulsive disorder (OCD), panic disorder, posttraumatic stress disorder (PTSD), social phobia and other phobias.

Preferably, the central nervous system disorder is a psychotic disorder selected from the
30 group of schizophrenia, delusional disorder, schizoaffective disorder, schizophreniform disorder and substance-induced psychotic disorder

Preferably, the central nervous system disorder is a personality disorder selected from the group of obsessive-compulsive personality disorder and schizoid, schizotypal disorder.

Preferably, the central nervous system disorder is a substance-related disorder selected
5 from the group of alcohol abuse, alcohol dependence, alcohol withdrawal, alcohol withdrawal delirium, alcohol-induced psychotic disorder, amphetamine dependence, amphetamine withdrawal, cocaine dependence, cocaine withdrawal, nicotine dependence, nicotine withdrawal, opioid dependence and opioid withdrawal.

Preferably, the central nervous system disorder is an eating disorder selected from the
10 group of anorexia nervosa and bulimia nervosa.

Preferably, the central nervous system disorder is a mood disorder selected from the group of bipolar disorders (I & II), cyclothymic disorder, depression, dysthymic disorder, major depressive disorder and substance-induced mood disorder.

Preferably, the central nervous system disorder is migraine.

15 Preferably, the central nervous system disorder is epilepsy or a convulsive disorder selected from the group of generalized nonconvulsive epilepsy, generalized convulsive epilepsy, petit mal status epilepticus, grand mal status epilepticus, partial epilepsy with or without impairment of consciousness, infantile spasms, epilepsy partialis continua, and other forms of epilepsy.

20 Preferably, the central nervous system disorder is attention-deficit/hyperactivity disorder.

Preferably, the central nervous system disorder is a cognitive disorder selected from the group of delirium, substance-induced persisting delirium, dementia, dementia due to HIV disease, dementia due to Huntington's disease, dementia due to Parkinson's
25 disease, dementia of the Alzheimer's type, substance-induced persisting dementia and mild cognitive impairment.

Of the disorders mentioned above, the treatment of anxiety, schizophrenia, migraine, depression, and epilepsy are of particular importance.

At present, the fourth edition of the Diagnostic & Statistical Manual of Mental
30 Disorders (DSM-IV) of the American Psychiatric Association provides a diagnostic

tool for the identification of the disorders described herein. The person skilled in the art will recognize that alternative nomenclatures, nosologies, and classification systems for neurological and psychiatric disorders described herein exist, and that these evolve with medical and scientific progresses.

- 5 Because such positive allosteric modulators of mGluR2, including compounds of Formula (I), enhance the response of mGluR2 to glutamate, it is an advantage that the present methods utilize endogenous glutamate.

Because positive allosteric modulators of mGluR2, including compounds of Formula (I), enhance the response of mGluR2 to agonists, it is understood that the present 10 invention extends to the treatment of neurological and psychiatric disorders associated with glutamate dysfunction by administering an effective amount of a positive allosteric modulator of mGluR2, including compounds of Formula (I), in combination with an mGluR2 agonist.

The compounds of the present invention may be utilized in combination with one or 15 more other drugs in the treatment, prevention, control, amelioration, or reduction of risk of diseases or conditions for which compounds of Formula (I) or the other drugs may have utility, where the combination of the drugs together are safer or more effective than either drug alone.

20 METHODS OF SYNTHESIS

The compounds according to the invention, in particular the compounds according to the Formula (I), (II), (II-a), (II-b), (II-c), (II-c1), (II-c2), (II-c3), (III), (III-a), (III-b), (III-c), (III-c1), (III-c2), (III-c3), (IV), (V), (V-a) and (V-b), may be prepared by methods known in the art of organic synthesis or by the following synthesis schemes.

- 25 In all of the schemes described below it is understood that protecting groups for sensitive or reactive groups are employed where necessary in accordance with the general principles of organic chemistry. Protecting groups are manipulated according to standard methods (T.W. Green and P.G.M. Wuts, 1991, *Protecting Groups in Organic Synthesis*, John Wiley & Sons, Inc.). These groups are then removed at a convenient 30 stage of the synthesis using methods that are readily apparent to those skilled in the art.

The compounds according to the invention may be represented as a mixture of enantiomers which may be resolved into their individual *R*- or *S*-enantiomers. If for instance, a particular enantiomer is required it may be prepared by asymmetric synthesis or by derivation with a chiral auxiliary and the resulting diastereomeric mixture separated. The auxiliary group can then be cleaved to provide the desired pure enantiomers. Alternatively, where the molecule contains a basic functional group such as an amino or an acidic functional group such as a carboxyl functional group, resolution may be performed by fractional crystallization from various solvents as the salt of an optical active acid or by other methods known in the literature (*e.g.* chiral column chromatography).

Resolution of the final product, an intermediate or a starting material may be performed by any suitable method known in the art (E.L. Eliel, S.H. Wilen and L.N. Mander, 1984, *Stereochemistry of Organic Compounds*, Wiley-Interscience).

Many of the heterocyclic compounds of Formula (I) to (V-b) where M_1 or M_2 is a heteroaromatic or heterocyclic group may be prepared using synthetic routes well known in the art (A.R. Katritzky and C. W. Rees, 1984, *Comprehensive Heterocyclic Chemistry*, Pergamon Press).

The synthesis of mGluR2 modulators disclosed herein are shown in the following synthetic schemes. Specific conditions for carrying out these reactions are provided in the examples. In one embodiment, the invention provides compounds of Formula V, where the $V_1T_1M_1$ group can be introduced by alkylation (N-C, bond formation) using the appropriate starting materials (*i.e.* pyridine derivatives or pyridinone derivatives). The $V_1T_1M_1$ group can be introduced by an alkylation (O-C or N-C, bond formation), a reductive amination (C-N, bond formation), or by displacement of a leaving group Cl, Br, I or OP, where OP is defined as a leaving group (*e.g.* tosylate, and mesylate) (C-N or C-O, bond formation). C-N, C-O and C-C bond formation are well understood by a person skilled in the art of organic chemistry. The synthetic schemes described below show exemplified approaches to compounds of the present invention but these routes should not be taken as the only possible synthetic routes to compounds of the present invention.

Pyridinones **g1** are commercially available or may be synthesized in ways described in the literature (Synthesis, 2002, 79-82; Tetrahedron Asymmetry, 1998, 2027; J. Heterocycl. Chem., 1974, 251; Synth. Commun., 1994, 1367). Selective bromination of a suitably substituted pyridine **g1** leads to bromopyridine **g2**. It is well known that such 5 brominations can lead to isomers (Bioorg. Med. Chem. Lett., 2002, 197-202) which can be separated by crystallization or column chromatography. The group $V_1T_1M_1$ can then be introduced in one step by alkylation using an elaborated $W-V_1T_1M_1$ group (where W is Cl, Br or OP) or alternatively, a $HO-V_1T_1M_1$ group using Mitsunobu conditions (Tetrahedron Letters, 1994, 2819-2822). It is described in the literature that this 10 procedure may give undesired O-alkylated product which can be separated by crystallization or column chromatography.

**Scheme 1**

15

Alternatively, the group $V_1T_1M_1$ can be introduced by reaction of a suitably substituted 2-methoxypyridine with an elaborated $W-V_1T_1M_1$ where W is Cl, Br or OP (Scheme 2).

20

Scheme 2

Suitably substituted, means in the context of the invention, substituents as defined in the list of preferred substituents or substituent which can be precursor of the

aforementioned preferred substituents and are therefore protected in a manner that a person skilled in the art would recognize.

The introduction of the $V_2T_2M_2$ can be done through carbon-carbon bond formation
5 (Scheme 3).

- Using a boronic acid under Suzuki-Miyaura conditions (Chem. Rev., 1995, 95, 54, 263) where V_2T_2 are bonds and M_2 is aryl, heteroaryl, cycloalkenearyl or cycloalkeneheteroaryl (Method A).
- Using a suitable alkylidinyl group under Sonogashira condition (J. Med. Chem., 10 2000, 43, 4288-4312) where V_2T_2 is an alkylidinyl group and M_2 is aryl, alkylaryl, heteroaryl or alkylheteroaryl (Method B).
- Using a suitable alkylidenyl group under Heck condition where V_2T_2 is alkylidenyl group and M_2 is aryl, alkylaryl, heteroaryl or alkylheteroaryl.

Scheme 3

The Suzuki-Miyaura (Method A, Scheme 3) carbon-carbon coupling reaction requires a catalyst such as $PdCl_2(PPh_3)_2$, $Pd(PPh_3)_4$, $Pd_2(dba)_3$, $Pd_2(dppf)$ or $Pd(OAc)_2$ and an aqueous or non-aqueous base such as sodium carbonate, potassium carbonate, sodium hydroxide or cesium fluoride in a suitable solvent such as dioxane, toluene, dimethoxyethane or DMF. The Sonogashira (Method B, Scheme 3) carbon-carbon coupling reaction requires a catalyst such as $PdCl_2(PPh_3)_2$, $Pd(PPh_3)_4$ or $Pd(OAc)_2$ in a suitable solvent such as DMF, acetonitrile or benzene. Typically, a co-catalyst such as
20

copper (I) iodide and a base such as triethylamine, diisopropylamine, or KOAc will also be present in the reaction mixture. The Suzuki-Miyaura and Sonogashira reactions typically react at temperatures ranging from 0°C to 150°C. Typically, the reaction is maintained for 1 to 24 hours, with 12 hours usually being sufficient. The product of the 5 reaction can be isolated and purified using standard techniques such as solvent extraction, column chromatography, crystallization, distillation and sublimation.

For a person skilled in the art of organic chemistry it is well understood that compound g7 can be hydrogenated under catalytic conditions using for example Pd/C and H₂ or ammonium formate (as hydrogen source) to afford the partially reduced analogs g8 10 which are also part of this invention. It is noteworthy that a full hydrogenated version cannot be achieved under these conditions and therefore another approach should be envisaged to achieve fully reduced compounds (Scheme 8).

The inventors are aware that some chemical groups within V₁T₁M₁ may not be compatible with the aforementioned carbon-carbon bond forming reaction (*i.e.* 15 Sonogashira, Heck or Suzuki-Miyaura). Therefore, the V₁T₁M₁ group can be introduced later in the synthesis (Scheme 4, Method A) and for example the Sonogashira reaction could be performed in the first step on a suitably substituted 2-methoxypyridine 5-boronic acid g9. The synthesis of such boronic acid is well described in the literature (J. Org. Chem., 2002, 67, 7541-7543) from commercial precursors with aryl and 20 heteroaryl triflates or bromides. Aryl and heteroaryl bromides are available from commercial sources. The synthesis can also be performed from a suitably substituted 2-methoxypyridine having in position 5 an halide or a triflate reacting in a Suzuki-Miyaura reaction with a boronic compound Q-M₂ where Q is B(OR)₂. (Method B)

Method A: W=B(OR)₂, Q=OSO₂CF₃, Br
 Method B: W=OSO₂CF₃, Br, Q=B(OR)₂

25

Scheme 4

Likewise, the $V_2T_2M_2$ (in this case V_2 and T_2 are bonds and M_2 is aryl, alkenearyl, aryl or heteroaryl) group can be introduced onto **g2** in the first step (Scheme 5), to yield compound **g12** which is then subjected to $W-V_1T_1M_1$ under conditions similar to those described in Scheme 1, Step 2.

5

Scheme 5

For a person skilled in the art of organic chemistry it is well understood that
10 functionalities present in compound **g5** (where Y is COOMe, CN or CHO) may be further transformed into compound **g13** as exemplified where Y is COOMe (Scheme 6).

Scheme 6

15

The acid compound generated from the ester **g5** is an excellent anchoring point for heterocycle formation such as benzothiazole, oxadiazole, benzoxazole or isoxazole. The composition of the invention is not limited only to the aforementioned heterocycles but extends to our preferred list of heterocycles which may be synthesized through a
20 similar scheme. (A. R. Katritzky and C. W. Rees, 1984, *Comprehensive Heterocyclic Chemistry*, Pergamon Press).

For one skilled in the art of organic chemistry it is well understood that functionalities present in compound **g5** (where Y is COOMe, CN or CHO) may be further transformed into compounds **g14**, **g15**, **g16** and **g17** (Scheme 7).

Scheme 7

The reductive amination to afford compound **g14** is well documented in the literature (Helv. Chim. Acta, 1998, 81, 1754). The synthesis of alcohol **g15** may utilize organometallic reagents such as the Grignard reagent exemplified here. However, many alternative organometallic reagents may be used and their preparation and use is well exemplified in the literature (M. Schlosser, 1994, *Organometallics in Synthesis*, John Wiley & Sons, Inc.). Compound **g15** can be subsequently transformed into ketone **g16** via oxidation or into alkyl **g17** via reductive elimination.

15 The inventors are aware that for specific compounds of the invention for instance compound **g19** neither compound **g5** nor compound **g3** are compatible intermediates, therefore, compound **g4** would be a suitable starting material (Scheme 8).

**Scheme 8**

All the methods used in Scheme 8 have been described in previous schemes.

5

A person skilled in the art of organic chemistry would recognise that the $\text{V}_1\text{T}_1\text{M}_1$ group assembly may be constructed stepwise to afford compounds **g20** and **g22** (Scheme 9).

10

Scheme 9

The acid moiety present in **g21** is an excellent anchoring point for heterocycle formation such as benzothiazole **g23**, benzoxazole **g24**, oxadiazole **g25** and isoxazole (Scheme 10) which are also compounds of this invention. The composition of the invention is not limited only to the aforementioned heterocycles but extend to our preferred list of heterocycles which can be synthesized through a similar scheme (A. R. Katritzky and C. W. Rees, 1984, *Comprehensive Heterocyclic Chemistry*, Pergamon Press; Chem. Pharm. Bull., 1999, 47, 120–122).

15

**Scheme 10**

In another embodiment, the invention provides compounds of Formula (II) (Scheme 5 11). The synthesis of starting materials (*i.e.* isoquinolin-1-one derivatives) when not commercially available are well described in the literature (Chem. Ber., 1972, 3726-3747; Chem. Pharm. Bull., 1982, 1680-1691, Chem. Pharm. Bull., 1986, 2754-2759). For a person skilled in the art of organic chemistry it is well understood that the preferred substituents as defined in the claims can be introduced using similar 10 chemistry. V₁T₁M₁ may be introduced using an elaborated W-V₁T₁M₁ (where W is Cl, Br or OP) in the presence of base such as NaH, K₂CO₃ or NaHMDS in a suitable solvent such as THF or DMF. It is noteworthy that these procedures may lead to undesired O-alkylated product which can be separated by crystallization or column chromatography.

15

Scheme 11

In another embodiment, the invention provides compounds of Formula (III) (Scheme 12). The syntheses of similar compounds are well described in the literature (Magn. 20 Reson. Chem., 26, 1988, 511-517; J. Chem. Soc. Perkin Trans., 1, 1980, 197-202; J. Heterocycl. Chem., 1983, 1707-1708, Heterocycles, 1997, 483-492). For a person

skilled in the art of organic chemistry it is well understood that preferred substituents as defined in the claims can be introduced using similar chemistry. $V_1T_1M_1$ can be introduced using an elaborated $W-V_1T_1M_1$ (where W is Cl, Br or OP) in presence of base such as NaH or K_2CO_3 or alternatively, with HO- $V_1T_1M_1$ using Mitsunobu condition (Tetrahedron Letters, 1994, 2819-2822) It is noteworthy that this procedure may lead to undesired O-alkylated product which can be separated by crystallization or column chromatography.

**Scheme 12**

10

In another embodiment of the invention provides compounds of Formula (IV) (Scheme 13).

15

Scheme 13

Alkylation of 2,4-dihydroxypyridine (commercially available) with a substituted benzyl halide is achieved using a base such as K_2CO_3 in a suitable solvent such as THF, CH_3CN or DMF under heating at $80^\circ C$. This transformation may lead to a mixture of products which can then be separated to isolate intermediate **g27**. The deprotection of 5 the hydroxybenzyl moiety can be selectively achieved using Pd/C and H_2 or ammonium formate (as hydrogen source). The subsequent alcohol can either be alkylated as described previously or transformed into a triflate. Triflate **g28** is a rather sensitive molecule and is used in the carbon-carbon bond formation (exemplified here with a Suzuki-Miyaura reaction or Sonogashira coupling, Scheme 3).

10

In another embodiment of the present invention compounds of Formula (V) may be prepared in accordance with Scheme 14. Compound **g31** can be deprotected in the presence of BBr_3 (J. Med. Chem., 1997, 40, 2085-2101). The resulting alcohol **g32** can be alkylated by XCH_2R where X may be a good leaving group such as Cl, Br, I or OP 15 in the presence of a base such as K_2CO_3 , Cs_2CO_3 or NaH in a suitable solvent such as DMF, acetone or tetrahydrofuran at an appropriate temperature or acylated by $XCOR$ where X is Cl in the presence of a base such as Et_3N or DIEA in a suitable solvent.

20

Scheme 14

In another embodiment of the present invention, the compounds of Formula (V) may be prepared according to the synthetic sequences illustrated in Scheme 15. Compound g35 may be hydrolyzed by standard procedures followed by reaction with a primary or secondary amine in order to lead to compound g37 (Scheme 6). Compounds g36 and 5 g38 represent an excellent anchoring point (acid, nitrile or amide) for heterocycle formation such as thiazole, oxadiazole, oxazole or isoxazole. The composition of the invention is not limited only to the aforementioned heterocycles but extends to our preferred list of heterocycles which can be synthesized through a similar scheme (A. R. Katritzky and C. W. Rees, 1984, *Comprehensive Heterocyclic Chemistry*, Pergamon Press).

Scheme 15

15 In another embodiment of the present invention, compounds of Formula (V) may be prepared in accordance with Scheme 16. For a person skilled in the art of organic chemistry it is well understood that aldehyde g4 can be reduced using LiAlH₄ to afford the alcohol g40 which can be alkylated using either R'X (where X is Cl, Br or OP) in

the presence of a base such as K_2CO_3 , Cs_2CO_3 or NaH in a suitable solvent such as DMF, acetone or tetrahydrofuran or alternatively, using $R'OH$ with Mitsunobu conditions as described in Scheme 1. Another way to synthesize compound **g42** is to first alkylate compound **g4** then reduce and finally to alkylate a second time.

5

**Scheme 16**

In one embodiment of the present invention compounds of Formula (V-b) may be prepared according to the synthetic sequences illustrated in Scheme 17. Compound **g3** can be transformed into boronic esters via metal-halogen exchange in the presence of $Pd(PPh_3)_4$. The resulting boronic esters can be coupled to M_2 via Suzuki-Miyaura coupling as described in Scheme 3.

**Scheme 17**

In another embodiment of the present invention, compounds of Formula (V) may be prepared in accordance with Scheme 18. For one skilled in the art of organic chemistry it is well understood that ester **g44** can be reduced using $LiAlH_4$ to afford the alcohol **g45**.

**Scheme 18**

- 5 In another embodiment of the present invention, the compounds of Formula (V) may be also prepared according to the synthetic sequences illustrated in Scheme 19. Compound **g3** can be submitted to Suzuki-Miyaura coupling with boronic compounds being substituted by a protected amino moiety. Then in Method A, the removal of the Boc group in compound **g46** may be achieved under classical conditions well known in the
10 art such as HCl or TFA . The resulting primary amine can then be either acylated by standard procedure or submitted to reductive amination (Scheme 7). And in Method B, compound **g46** can be submitted first to alkylation using preferentially NaH as base and tetrahydrofuran as organic solvent followed by deprotection under acidic conditions (for example the reaction can be done in an organic solvent such as DCM with an acid
15 such as TFA typically at room temperature to give compound **g48b**.

**Scheme 19**

5 The synthesis of alcohol **g50** may require organometallic reagents such as the Grignard reagent exemplified here (Scheme 20). However, many alternative organometallic reagents may be used and their preparation and use is well exemplified in the literature (M. Schlosser, 1994, *Organometallics in Synthesis*, John Wiley & Sons, Inc.).

10

**Scheme 20**

Another embodiment of the invention provides compounds of Formula (IV) (exemplified in Scheme 21). Substituted 3-bromo-pyridine or 3-iodopyridine **g51** can be subjected to directed ortho metalation at low temperatures (*e.g.* -78°C) in a solvent such as THF or diethyl ether with lithium diisopropylamide and subsequently quenched with an electrophilic halogen source (*e.g.* Br₂ or I₂). 4-halopyridine **g52** can then be functionalized by carbon-carbon bond forming reaction (Step 2, exemplified here by Suzuki-Miyaura or Stille reaction) under condition similar to those described in Scheme 3. Displacement of 2-halopyridine **g53** by sodium methoxide in methanol yielded 2-methoxypyridine **g54**. Subsequent alkylation was then performed as described in Scheme 2 to yield pyridinone **g55**.

Scheme 21

Another embodiment of the invention provides compounds of Formula (V) (exemplified in Scheme 22). Method A, substituted 5-bromo-2-methoxy-pyridine **g4** was subjected to lithium-halogen exchange at -78°C in an a solvent such as THF or diethyl ether with butyl lithium and quenched with a substituted alkyl bromide (M₂V₂T₂X) to give compound **g56**. Alkylation was then performed as described in example 1 to give compound **g57**.

In a similar manner, compound **g4** can be involved in a Buchwald reaction (Method B) with an amine in conditions known in the art using palladium, a suitable catalyst and a ligand to afford after alkylation compound **g57** (where $V_2 = \text{NH}$ or N-alkyl).

Scheme 22

Another embodiment of the invention provides compounds of Formula (V-b) (Scheme 23). Step 1, nucleophilic displacement of 2-halopyridine **g58** (where $X = \text{I, Br, Cl or F}$)
 10 by sodium methoxide in methanol yielded 2-methoxypyridine **g59**. Bromination was achieved using bromine, aqueous potassium bromide, potassium hydroxide and water (Step 2). The bromopyridine **g60** was then functionalized by carbon-carbon bond forming reaction (Step 3, exemplified here by Suzuki-Miyaura reaction) under conditions similar to those described in Scheme 3. Step 4, alkylation was then
 15 performed as described in Scheme 2 to give compound **g62**.

Another embodiment of the invention provides compounds of Formula (V-b) (Scheme 5 24). Step 1, substituted pyridine **g2** (where X = Br, I or TfO) was first functionalized by carbon-carbon bond forming reaction (Step 1, exemplified here by Suzuki-Miyaura reaction) under conditions similar to those described in Scheme 3. Alkylation was performed with alkyl halides ($W-R_1$), NaI in MeCN at 70°C (Step 2). The resulting alcohol **g3** was alkylated using standard Williamson ether synthesis (Step 3, NaH, 10 DMF and alkyl halide at 0°C) to yield compound **g4**.

**Scheme 24**

Another embodiment of the invention provides compounds of Formula (V-b) (Scheme 5 25). Alkylation of 2-hydroxypyridine **g2** was performed as described in example 1. Step 2, bromopyridine 3 was first functionalized by carbon-carbon bond forming reaction (exemplified here by Suzuki-Miyaura reaction) under conditions similar to those described in Scheme 3. The alcohol **g65** was then alkylated to obtain compound 10 **g66**. Or bromination of compound **g65** was achieved using PPh_3 , NBS and Et_2O at - $20^\circ C$ (Step 3). The resulting bromide was alkylated using standard Williamson ether synthesis to yield ether **g66** (Step 4, alkyl alcohol, NaH and DMF at $0^\circ C$).

- 5 Another embodiment of the invention provides compounds of Formula (V-b) (Scheme 26). Step 1, lithium-halogen exchange on substituted 5-bromo-2-methoxy-pyridine **g4** at -78°C in THF with butyl lithium was reacted with a substituted carbonyl compounds. The resulting alcohol **g67** was then eliminated using MsCl, TEA and DCM at room temperature (Step 2). The olefin **g68** was then hydrogenated using standard conditions
 10 (H₂, Pd/C in EtOH). Finally, the compound was alkylated as described for Scheme 2 to give compound **g70**.

Scheme 26

Another embodiment of the invention provides compounds of Formula (I) (Scheme 5 27). Where W is Cl, Br, I and OTf, pyrazine **g71** was alkylated using standard conditions (Step 1). NaH, DMF or K₂CO₃, MeCN, at room temperature, elevated temperatures or with microwave irradiation. Alternatively, where W is OH, alkylation could be performed by Mitsunobu reaction using, DEAD, PPh₃, THF at room temperature or 60°C. The bromopyrazine **g72** was then subjected to a carbon-carbon bond forming reaction (Step 2, exemplified here by Suzuki-Miyaura reaction) under 10 conditions similar to those described in Scheme 3 to give compound **g73**.

Where X= C or N

Scheme 27

In another embodiment of the present invention, the compounds of Formula (II) may be prepared according to the synthetic sequences illustrated in Scheme 28. Isoquinoline g74 can be converted into isoquinolone g76 (Heterocycles, 1996, 42, 415) via oxidation with mCPBA followed by rearrangement of the N-oxide in the presence of acetic anhydride and then by basic sodium hydroxide cleavage. Finally, the resulting isoquinolone g76 can be alkylated as described in Scheme 1 and submitted to Buchwald coupling (if V₂=NR) as in Scheme 22. It is obvious that introduction of V₁T₁M₁ or V₂T₂M₂ groups can be done through the same process as described earlier.

10

Scheme 28

In another embodiment of the present invention, the compounds of Formula (II) may be prepared according to the synthetic sequences illustrated in Scheme 29. Compound g77 can be submitted to a Sonogashira coupling and reduced (Scheme 8) to yield compound g79. Then the isoquinoline may be transformed into alkylated isoquinolone g82 as presented in Scheme 29.

Scheme 29

In another embodiment of the present invention, compounds of Formula (V-b) can be prepared in accordance with Scheme 30. Bromopyridine **g83** can be functionalized by carbon-carbon bond forming reaction (exemplified here by Suzuki-Miyaura reaction) under condition similar to those described in Scheme 3. The resulting pyridine **g84** can be lithiated by strong base such as butyl lithium or LDA in THF at low temperatures (e.g. -78°C) and subsequently quenched with paraformaldehyde to give alcohol **g85** after workup. N-Alkylation by NaI in acetonitrile at elevated temperatures using W-V₁T₁M₁ yields compound **g86**. The resulting alcohol **g86** can be alkylated by the methods described in Scheme 24, step 3.

Scheme 30

In another embodiment of the present invention, compounds of Formula (V-b) can be prepared in accordance with Scheme 31. Pyridine **g84** was prepared as described in Scheme 30. Bromination with NBS under UV light in CCl₄ at reflux gave compound

g88. Alkylation using ROH and sodium methoxide at reflux gave compound **g89**. The resulting alcohol **g89** can then be alkylated by the methods described in Scheme 1.

5

Scheme 31

Compound **g93** (Scheme 32) can be synthesized from either bromide **g91** or alcohol **g92** using any one of the procedures known in the art, for example, using a copper catalyzed coupling reaction conditions when R is aryl or *via* a Mitsunobu reaction conditions when R is alkyl respectively. Finally, the resulting ether **g93** can be alkylated with for example alkyl halide, in an organic solvent such as acetonitrile or dimethylformamide and with a base such as K_2CO_3 .

Scheme 32

Compound **g96** (Scheme 33) can be synthesized from pyridine **g95** (prepared as described in Schemes 1 and 3) *via* halogen exchange. Then the iodopyridine may be coupled through Sonogashira or Heck conditions to alkynes or alkenes respectively. The resulting insaturated compound **g97** can then be reduced as exemplified earlier by 5 hydrogenation to give compound **g98**.

Scheme 33

- 10 In another embodiment of the present invention, the compounds of Formula (II) may be prepared according to the synthetic sequences illustrated in Scheme 34. Isoquinoline **g99** can be converted into his *N*-oxide **g100** *via* oxidation in the presence of MCPBA followed by standard alkylation. Rearrangement of *N*-oxide **g101** in the presence of acetic anhydride and basic sodium hydroxide cleavage yielded isoquinolone **g102**.
 15 Finally, the resulting isoquinolone **g102** can be alkylated as described in Scheme 1. It is obvious that introduction of V₁T₁M₁ or V₂T₂M₂ groups can be done through the same process as described earlier.

**Scheme 34**

5 EXPERIMENTAL

Several methods for preparing the compounds of this invention are illustrated in the following Examples.

Unless otherwise noted, all starting materials were obtained from commercial suppliers and used without further purification.

- 10 Specifically, the following abbreviations may be used in the examples and throughout the specification.

AcOEt (ethyl acetate)	M (molar)
AcOH (acetic acid)	MeOH (methanol)
BBr ₃ (boron tribromide)	mg (milligrams)
BINAP (\pm -1,1'-Bi(2-naphthol)	MgSO ₄ (magnesium sulphate)
Br ₂ (bromine)	MHz (megahertz)
CDCl ₃ (deuterated chloroform)	min (minutes)
CCl ₄ (carbon tetrachloride)	μL (microliters)
CH ₂ Cl ₂ (dichloromethane)	mL (milliliters)
MCPBA (3-chloroperbenzoic acid)	mmol (millimoles)
DEAD (diethyl azodicarboxylate)	M.p. (melting point)
DIBAL (diisobutyl aluminium hydride)	NaBH(OAc) ₃ (sodium borohydride triacetate)
DME (dimethoxyethane)	Na ₂ CO ₃ (sodium carbonate)
DMF (dimethylformamide)	NaH (sodium hydride)
DMSO (dimethyl sulfoxide)	NaHCO ₃ (sodium hydrogenocarbonate)

Dppf (1,1'-bis(diphenylphosphanyl)ferrocene)	NaHMDS (sodium hexamethyldisilazane)
EDCI.HCl (1-3(dimethylaminopropyl)-3-ethylcarbodiimide, hydrochloride)	NaI (sodium iodide)
Et ₃ N (triethylamine)	NaO ^t Bu (sodium <i>tert</i> -butoxide)
Et ₂ O (diethyl ether)	Na ₂ SO ₄ (sodium sulphate)
EtOH (ethanol)	NBS (N-bromosuccinimide)
g (grams)	NH ₄ Cl (ammonium chloride)
¹ H (proton)	NH ₄ OH (ammonium hydroxide)
H ₂ (hydrogen)	NMR (Nuclear Magnetic Reasonance)
HCl (hydrochloric acid)	Pd ₂ (dba) ₃ (palladium (II)dibenzylideneacetone)
HPLC (High Pressure Liquid Chromatography)	PdCl ₂ (dppf) ₂ (Bis(1,1'-bis(diphenylphosphanyl)ferrocene palladium (II) dichloride)
Hz (Hertz)	PdCl ₂ (PPh ₃) ₂ (Bis(triphenylphosphine) palladium (II) dichloride)
KBr (potassium bromide)	Pd(OAc) ₂
K ₂ CO ₃ (potassium carbonate)	Pd(PPh ₃) ₄ (tetrakis(triphenylphosphine)palladium(0))
KOAc (potassium acetate)	PPh ₃ (triphenylphosphine)
KI (potassium iodide)	Rf
KOtBu (potassium <i>tert</i> -butoxide)	RT (Retention Time)
KOH (potassium hydroxide)	TFA (trifluoroacetic acid)
K ₃ PO ₄ (potassium phosphate)	THF (tetrahydrofuran)
LCMS (Liquid Chromatography Mass Spectrum)	TLC (thin layer chromatography)
LiAlH ₄ (lithium aluminium hydride)	

All references to brine refer to a saturated aqueous solution of NaCl. Unless otherwise indicated, all temperatures are expressed in °C (degrees Celsius). All reactions are conducted not under an inert atmosphere at room temperature unless otherwise noted.

5

The microwave oven used is an apparatus from Biotage (OptimizerTM) equipped with an internal probe that monitors reaction temperature and pressure, and maintains the desired temperature by computer control.

EXAMPLES**EXAMPLE 1 : 1-(4-Chloro-2-fluorobenzyl)-5-(6-methoxypyridin-3-yl)pyridin-2(1*H*)-one (Final Compound 6-51)**5 *Step 1 : 5-Bromopyridin-2(1*H*)-one*

According to Scheme 1 Step 1: A mixture of 2-hydroxypyridine (1eq, 100mmol, 10.0g) in AcOH (100mL) was treated with NBS (1.06eq, 110mmol, 19.8g) at room temperature for 4 hours. The mixture was concentrated, azeotroped twice with EtOH then the solid was taken up in hot EtOH (100mL). After cooling to room temperature, 10 the precipitate was removed by filtration and recrystallized from EtOH to provide 5-bromopyridin-2(1*H*)-one (51.7mmol, 9.00g, 49%) as a pale brown solid.

R_f = 0.60 (AcOEt/MeOH/NEt₃ 100/15/1); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 0.59-2.46min; MS m/z (CI) [MH]⁺ = 174, 176.

15 *Step 2 : 1-(4-Chloro-2-fluorobenzyl)-5-bromopyridin-2(1*H*)-one*

According to Scheme 1 Step 2: K₂CO₃ (10eq, 0.11mmol, 16.0g) and 1-(bromomethyl)-4-chloro-2-fluorobenzene (1.5eq, 17.0mmol, 3.90g) was added to a solution of 5-bromopyridin-2(1*H*)-one (1eq, 11.0mmol, 2.00g), in THF (100mL). The suspension was stirred for 2 hours at room temperature and 17 hours at 60°C. The reaction mixture 20 was filtered and the mother liquor was concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepak column 70g SiO₂) using CH₂Cl₂/AcOEt 80/20 as eluent to afford the title compound 1-(4-chloro-2-fluorobenzyl)-5-bromopyridin-2(1*H*)-one (9.10mmol, 2.87g, 79%) as a white solid.

25 LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.12min; MS m/z (CI) [MH]⁺ = 316, 318.

Step 3 : 1-(4-Chloro-2-fluorobenzyl)-5-(6-methoxypyridin-3-yl)pyridin-2(1H)-one

According to Scheme 3 Method A: To a mixture of 1-(4-chloro-2-fluorobenzyl)-5-bromopyridin-2(1H)-one (1eq, 1.00mmol, 0.40g) in dioxane/K₃PO₄ (2M, 10mL), were added Pd(PPh₃)₄ (0.3eq, 0.4mmol, 0.4g) and 6-methoxypyridin-3-ylboronic acid (1.5eq, 5 2.00mmol, 0.30g) then the reaction mixture was heated at 80°C for 17 hours. The mixture was diluted with AcOEt. The organic fraction was washed with brine, dried over Na₂SO₄, filtered and concentrated under reduced pressure. The crude product was purified by silica gel chromatography (AIT Flashsmart prepak column 25g SiO₂, CH₂Cl₂/AcOEt 70/30) and by crystallization in pentane/Et₂O to afford 1-(4-chloro-2-10 fluorobenzyl)-5-(6-methoxypyridin-3-yl)pyridin-2(1H)-one (0.91mmol, 0.40g, 91%) as a white solid.

M.p.: 136°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.13min; MS *m/z* (CI) [MH]⁺ = 345, 347; ¹H NMR (300MHz, DMSO-d⁶) δ 3.87 (s, 3H), 5.17 (s, 2H), 6.53 (d, J=9.5Hz, 1H), 6.89 (d, J=8.7Hz, 1H), 7.17-7.24 (m, 1H), 7.27 (dd, J=2.0Hz and 15 8.4Hz, 1H), 7.46 (dd, J=2.0Hz and 10.2Hz, 1H), 7.84-7.94 (m, 2H), 8.20 (d, J=2.6Hz, 1H), 8.38 (d, J=2.3Hz, 1H).

EXAMPLE 2 : 1-(4-Chlorobenzyl)-5-(4-(3-hydroxypropyl) phenyl) pyridin-2(1H)-one (Final Compound 2-16)

Step 1 : 1-(4-Chlorobenzyl)-5-bromopyridin-2(1H)-one

According to Scheme 1 Step 2: The title compound was prepared from 5-bromopyridin-2(1H)-one (1eq, 29.0mmol, 5.00g, Example 1 Step 1) and 4-chlorobenzyl bromide (1.2eq, 34.0mmol, 7.10g) according to the procedure described 25 for Example 1 Step 2. After concentration of the solvent, water was added. The aqueous phase was extracted with AcOEt and the combined organic fractions were dried over Na₂SO₄, filtered and concentrated under reduced pressure. The crude product was recrystallized with pentane/Et₂O 50/50 to afford 1-(4-chlorobenzyl)-5-bromopyridin-2(1H)-one (26.2mmol, 7.82g, 91%) as a white solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.18min; MS m/z (CI) [MH]⁺ = 299, 301.

Step 2 : 1-(4-Chlorobenzyl)-5-(4-(3-hydroxypropyl)phenyl)pyridin-2(1H)-one

- 5 According to Scheme 3 Method A: To a solution of 1-(4-chlorobenzyl)-5-bromopyridin-2(1H)-one (1eq, 0.33mmol, 0.10g) in dioxane/saturated aqueous NaHCO₃ (1:1, 6mL) was added Pd(PPh₃)₄ (0.15eq, 0.05mmol, 58mg) and 4-(3-hydroxypropyl)phenylboronic acid (1.5eq, 0.50mmol, 90.0mg). The reaction was then stirred at 90°C for 4.5 hours. The reaction was allowed to cool and diluted with AcOEt.
- 10 The reaction was washed with saturated NH₄Cl solution, brine and the organic phase extracted (x3). The combined organic fractions were dried (Na₂SO₄), filtered and concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 15g SiO₂) using pure AcOEt as the eluent to afford 1-(4-chlorobenzyl)-5-(4-(3-hydroxypropyl)phenyl)pyridin-2(1H)-one (0.22 mmol, 78 mg, 66%) as a white solid.
- 15 M.p.: 165°C; Rf = 0.05 (CH₂Cl₂/AcOEt 80/20); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.78min; MS m/z (CI) [MH]⁺ = 354, 356; ¹H NMR (300MHz, DMSO-d⁶) δ 1.64-1.77 (m, 2H), 2.61 (t, J=7.3Hz, 2H), 3.32-3.46 (m, 2H), 4.48 (t, J=5.1Hz, 1H), 5.15 (s, 2H), 6.52 (d, J=9.5Hz, 1H), 7.24 (d, J=8.1Hz, 2H), 7.35-7.44 (4H), 7.47 (d, J=8.1Hz, 2H), 7.83 (dd, J=2.6Hz, 9.5Hz, 1H), 8.23 (d, J=2.6Hz, 1H).

EXAMPLE 3 : N-(3-(1-Isopentyl-6-oxo-1,6-dihydropyridin-3-yl)phenyl)methanesulfonamide (Final Compound 8-02)

- 25 *Step 1 : 5-Bromo-1-isopentylpyridin-2(1H)-one*

According to Scheme 1 Step 2: The title compound was prepared from 5-bromopyridin-2(1H)-one (1eq, 0.01mol, 1.73g) and 1-isopentylbromide (1eq, 0.01mmol, 1.51g) according to the procedure described for Example 1 Step 2. Reaction conditions: 3 hours under reflux in acetonitrile. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column SiO₂) using

$\text{CH}_2\text{Cl}_2/\text{AcOEt}$ (80/20) as the eluent to afford 5-bromo-1-isopentylpyridin-2(*H*)-one (6.23mmol, 1.52g, 62%) as a brown oil.

Step 2 : N-(3-(1-Isopentyl-6-oxo-1,6-dihdropyridin-3-yl)phenyl)methanesulfonamide

5 According to scheme 3 Method A: The title compound was prepared from 5-bromo-1-isopentylpyridin-2(*H*)-one (1eq, 0.41mmol, 0.10g) and 3-(methylsulfonamido)phenylboronic acid (1.5eq, 0.61mmol, 0.13g) according to the procedure described for Example 2 Step 2. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 15g SiO_2) using
10 $\text{CH}_2\text{Cl}_2/\text{AcOEt}$ (80/20) as the eluent to afford N-(3-(1-isopentyl-6-oxo-1,6-dihdropyridin-3-yl)phenyl)methanesulfonamide (0.32mmol, 0.11g, 77%) as a white solid.

M.p.:159°C; $R_f = 0.42$ ($\text{CH}_2\text{Cl}_2/\text{AcOEt}$ 50/50); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.49min; MS *m/z* (CI) [MH]⁺ = 335; ¹H NMR (300MHz, DMSO-d⁶) δ 15 0.93 (d, 6H), 1.49-1.62 (m, 3H), 3.02 (s, 3H), 3.91-4.00 (m, 2H), 6.48 (d, J=9.4Hz, 1H), 7.10-7.18 (m, 1H), 7.28-7.42 (m, 3H), 7.70 (dd, J=2.6Hz, 9.4Hz, 1H), 8.03 (d, J=2.6Hz, 1H), 9.78 (s, 1H).

EXAMPLE 4 : N-(5-(1-(4-Chlorobenzyl)-6-oxo-1,6-dihdropyridin-3-yl)-2-

20 **methoxyphenyl)methanesulfonamide (Final Compound 2-56)**

Step 1 : 4-Methoxy-3-(methylsulfonamido)phenylboronic acid

To a solution of 3-amino-4-methoxyphenylboronic acid (1eq, 2.10mmol, 0.35g) in
25 CH_2Cl_2 (5mL) at -78°C was added Et₃N (6eq, 13.0mmol, 1.7mL). The reaction was stirred for 30 minutes then methanesulfonyl chloride (1.1eq, 2.30mmol, 0.26g) was added. The reaction was then stirred at -78°C for 1 hour. The reaction was allowed to warm to room temperature and diluted with CH_2Cl_2 . The reaction was washed with 1.0N aqueous HCl and the organic phase was extracted (x3). The combined organic fractions were dried (Na_2SO_4), filtered and concentrated under reduced pressure to

afford 4-methoxy-3-(methylsulfonamido)phenylboronic acid (1.92mmol, 0.49g, 96%) as a white solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 2.11min; MS m/z (CI) [MH]⁺ = 246.

5

Step 2 : N-(5-(1-(4-Chlorobenzyl)-6-oxo-1,6-dihydropyridin-3-yl)-2-methoxyphenyl)methane sulphonamide

According to Scheme 3 Method A: The title compound was prepared from 1-(4-chlorobenzyl)-5-bromopyridin-2(1H)-one (1eq, 1.80mmol, 0.55g, Example 2 Step 1) and 4-methoxy-3-(methylsulfonamido)phenylboronic acid (1.1eq, 2.00mmol, 0.49g) according to the procedure described for Example 1 Step 3. Reaction conditions: 4 hours at 80°C. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 25g SiO₂) using CH₂Cl₂/AcOEt (90/10) then recrystallized from pentane/Et₂O to afford N-(5-(1-(4-chlorobenzyl)-6-oxo-1,6-dihydropyridin-3-yl)-2-methoxyphenyl)methanesulphonamide (0.31mmol, 0.32g, 41%) as a white solid.

M.p.: 151°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.75min; MS m/z (CI) [MH]⁺ = 419, 421; ¹H NMR (300MHz, DMSO-d⁶) δ 2.88 (s, 3H), 3.76 (s, 3H), 5.08 (s, 2H), 6.44 (d, J=10.9Hz, 1H), 7.05 (d, J=10.9Hz, 1H), 7.27-7.35 (m, 3H), 7.42-7.60 (m, 3H), 7.68 (dd, J=3.5Hz, J=10.9Hz, 1H), 8.08 (d, J=3.5Hz, 1H), 8.94 (s, 1H).

EXAMPLE 5 : 1-(3-Fluorobenzyl)-5-(2-(pyridin-3-yl)ethynyl)pyridin-2(1H)-one hydrochloride (Final Compound 7-02)

25 *Step 1 : 1-(3-Fluorobenzyl)-5-bromopyridin-2(1H)-one*

According to Scheme 1 Step 2: 1-(3-Fluorobenzyl)-5-bromopyridin-2(1H)-one was prepared from 5-bromopyridin-2(1H)-one (Example 1 Step 1) and 3-fluorobenzyl bromide according to the procedure described for Example 2 Step 1. The crude product

was washed with pentane/Et₂O 50/50 to afford 1-(3-fluorobenzyl)-5-bromopyridin-2(1H)-one (10.7mmol, 3.00g, 62%) as a white solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.05min; MS m/z (CI) [MH]⁺= 283.

5

Step 2 : 1-(3-Fluorobenzyl)-5-(2-(pyridin-3-yl)ethynyl)pyridin-2(1H)-one hydrochloride

According to Scheme 3 Method B: Copper iodide (0.1eq, 6.7mg, 35μmol) and Et₃N
10 (20eq, 7.09mmol, 1.00mL) in DMF (5mL) were stirred under nitrogen for 10 min. PdCl₂(PPh₃)₂ (0.1eq, 35μmol, 25mg) was added to the reaction mixture and the reaction mixture was stirred for a further 15 min at room temperature. 1-(3-Fluorobenzyl)-5-bromopyridin-2(1H)-one (1eq, 0.35mmol, 0.10g) and 3-ethynylpyridine (1.2eq, 0.43mmol, 0.04g) were successively added to the reaction
15 mixture. After stirring at 80°C for 4 hours, the reaction mixture was quenched with water and the aqueous layer was washed with AcOEt (3x30mL). The combined organic layers were dried over Na₂SO₄, filtered and evaporated under reduced pressure. The crude product was purified by chromatography on silica gel using CH₂Cl₂/AcOEt 90/10 + 1% HCl 2M in dioxane as eluent. 1-(3-Fluorobenzyl)-5-(2-(pyridin-3-yl)ethynyl)pyridin-2(1H)-one hydrochloride was obtained as a beige solid (32 μmol, 20 11mg, 9%).

M.p.: 179°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.68 min; MS m/z (CI) [MH]⁺= 305; ¹H NMR (500MHz, DMSO-d⁶) δ 5.12 (s, 2H), 6.50 (d, J=9.4Hz, 1H), 7.11-7.20 (3H), 7.37-7.43 (m, 1H), 7.51 (dd, J=5.0Hz and 8.0Hz, 1H), 7.58 (dd, 25 J=2.5Hz and 9.4Hz, 1H), 7.96-8.00 (m, 1H), 8.37 (d, J=2.4Hz, 1H), 8.59 (dd, J=1.6Hz and 5.0Hz, 1H), 8.73 (d, J=2.1Hz, 1H).

EXAMPLE 6 : 1-(4-Chloro-3-fluorobenzyl)-5-(benzo[d]thiazol-2-yl)pyridin-2(1H)-one (Final Compound 6-19)

Step 1 : 2-(6-Methoxypyridin-3-yl)benzo[d]thiazole

- 5 According to Scheme 4 Method A: The title compound was prepared from 2-bromobenzo[d]thiazole (1eq, 0.91mmol, 0.20g) and 6-methoxypyridin-3-ylboronic acid (1.5eq, 1.36mmol, 0.21g) according to the procedure described for Example 2 Step 2. The crude product was purified by silica gel chromatography (AIT Flashsmart prepakced column 25g SiO₂) using cyclohexane/AcOEt 95/5 as eluent to afford 2-(6-methoxypyridin-3-yl)benzo[d]thiazole (0.74mmol, 0.18g, 82%) as a white solid.
- 10

Step 2 : 1-(4-Chloro-3-fluorobenzyl)-5-(benzo[d]thiazol-2-yl)pyridin-2(1H)-one

- According to Scheme 4, Step 1: A mixture of 2-(6-methoxypyridin-3-yl)benzo[d]thiazole (1eq, 0.25mmol, 60mg), NaI (5eq, 1.20mmol, 0.19g) and 4-chloro-3-fluorobenzylbromide (5eq, 1.20mmol, 0.28g) in acetonitrile (10mL) was stirred for 14 hours at 90°C. The crude residue was partitioned between CH₂Cl₂ and water. The aqueous layer was extracted with CH₂Cl₂. The combined organic layers were dried over MgSO₄, filtered and evaporated. The crude product was purified by silica gel chromatography (AIT Flashsmart prepakced column 25g SiO₂) using CH₂Cl₂/AcOEt 95/5 as eluent to afford 1-(4-chloro-3-fluorobenzyl)-5-(benzo[d]thiazol-2-yl)pyridin-2(1H)-one (0.14mmol, 0.05g, 58%) as a beige solid.
- 15
- 20

- M.p.:164°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.89min; MS m/z (CI) [MH]⁺ = 371, 373; ¹H NMR (500MHz, CDCl₃) δ 5.26 (s, 2H), 6.61 (d, J=9.5Hz, 1H), 7.22-7.25 (m, 1H), 7.41-7.45 (m, 1H), 7.45-7.48 (m, 1H), 7.50-7.54 (m, 1H), 7.56-7.60 (m, 1H), 7.96 (d, J=7.7Hz, 1H), 8.11 (dd, J=2.7Hz and 9.5Hz, 1H), 8.11-8.13 (m, 1H), 8.81 (d, J=2.6Hz, 1H).
- 25

EXAMPLE 7 : 5-(4-Methoxyphenyl)-1-(2-phenoxyethyl)pyridin-2(1*H*)-one (Final Compound 5-18)

*Step 1 : 5-(4-Methoxyphenyl)-(1*H*)-pyridin-2-one*

- 5 According to Scheme 5 Step 1: The title compound was prepared from 5-bromopyridin-2(1*H*)-one (1eq, 17.2mmol, 3.00g, Example 1 Step 1) and 4-methoxyphenylboronic acid (1.5eq, 25.9mmol, 3.93g) according to the procedure described for Example 2 Step 2. Reaction conditions: 4.5 hours at 120°C. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepakced column 70g SiO₂) using pure AcOEt then AcOEt/MeOH 95/5 as eluent to afford 5-(4-methoxyphenyl)-(1*H*)-pyridin-2-one (11.9mmol, 2.40g, 69%) as a white solid.
- 10 Rf = 0.48 (AcOEt/MeOH 90/10); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 2.56min; MS m/z (CI) [MH]⁺ = 202.

15

*Step 2 : 5-(4-Methoxyphenyl)-1-(2-phenoxyethyl)pyridin-2(1*H*)-one*

- According to Scheme 5 Step 2: To a solution of 5-(4-methoxyphenyl)-(1*H*)-pyridin-2-one (1eq, 0.30mmol, 60mg) in THF (3mL) was added K₂CO₃ (10eq, 3.00mmol, 0.41g). The reaction was stirred at room temperature for 30 minutes then 1-(2-bromoethoxy)benzene (3eq, 0.90mmol, 0.18g) was added. The reaction was stirred at 60°C for 12 hours. After concentration of the solvent, acetonitrile (3mL) was added followed by K₂CO₃ (10eq, 3.00mmol, 0.41g) and 1-(2-bromoethoxy)benzene (10eq, 3.00mmol, 0.60g) then the reaction was microwaved for 5 minutes at 180°C. The reaction was filtered and concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepakced column 10g SiO₂) using CH₂Cl₂/AcOEt (80/20) as the eluent to afford 5-(4-methoxyphenyl)-1-(2-phenoxyethyl)pyridin-2(1*H*)-one (0.13mmol, 42mg, 44%) as a yellow oil.

Rf = 0.29 (CH₂Cl₂/AcOEt 90/10); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.31min; MS m/z (CI) [MH]⁺ = 322; ¹H NMR (500MHz, CDCl₃) δ 3.86 (s, 3H), 4.33-

4.37 (m, 2H), 4.38-4.43 (m, 2H), 6.67 (d, $J=10.1\text{Hz}$, 1H), 6.87-6.90 (m, 2H), 6.95-6.99 (m, 3H), 7.25-7.30 (m, 2H), 7.32-7.35 (m, 2H), 7.59-7.62 (m, 2H).

EXAMPLE 8 : 5-(4-Methoxyphenyl)-1-((6-(trifluoromethyl)pyridin-3-yl)methyl)-5 pyridin-2(1*H*)-one hydrochloride (Final Compound 4-47)

According to Scheme 5 Step 2: The title compound was prepared from 5-(4-methoxyphenyl)-(1*H*)-pyridin-2-one (1eq, 0.50mmol, 0.10g, Example 7 Step 1) and 5-(chloromethyl)-2-(trifluoromethyl)pyridine (1.5eq, 0.74mmol, 0.15g) according to the procedure described for Example 1 Step 2. Reaction conditions: 6 hours at 70°C and 48 hours at room temperature. The crude product was purified by silica gel chromatography (AIT Flashsmart prepak column 10g SiO₂, CH₂Cl₂/AcOEt 90/10). The purified oil was dissolved in Et₂O and HCl (4M in dioxane) was added. The resulting precipitate was filtered, dried to afford 5-(4-methoxyphenyl)-1-((6-(trifluoromethyl)pyridin-3-yl)methyl)pyridin-2(1*H*)-one hydrochloride (83μmol, 30mg, 17%) as a white solid.

M.p.: 168°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.06min; MS *m/z* (CI) [MH]⁺ = 361; ¹H NMR (500MHz, CDCl₃) δ 3.76 (s, 3H), 5.27 (s, 2H), 6.51 (d, J=9.4Hz, 1H), 6.98 (d, J=6.7Hz, 2H), 7.51 (d, J=6.7Hz, 2H), 7.83 (dd, J=2.7Hz and 9.4Hz, 1H), 7.88 (d, J=8.2Hz, 1H), 8.00 (dd, J=1.7Hz and 8.2Hz, 1H), 8.28 (d, J=2.5Hz, 1H), 8.81 (d, J=1.7Hz, 1H).

EXAMPLE 9 : 1-(Cyclohexylmethyl)-5-(4-methoxyphenyl)pyridin-2(1*H*)-one (Final Compound 4-03)

25

According to Scheme 5 Step 2: To a solution of 5-(4-methoxyphenyl)pyridin-2(1*H*)-one (1eq, 0.35mmol, 70mg, Example 7 Step 1) in acetonitrile (2mL) were added K₂CO₃ (10eq, 3.50mmol, 0.48g) and (bromomethyl)cyclohexane (10eq, 3.50mmol, 0.49mL).

The reaction was microwaved for 10 minutes at 180°C. The reaction was allowed to cool. The reaction was then filtered and concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 15g SiO₂) using CH₂Cl₂/AcOEt (80/20, R_f=0.3). The product was 5 further purified by reverse phase C₁₈ column using water/acetonitrile 60/40 to afford 1-(cyclohexylmethyl)-5-(4-methoxyphenyl)pyridin-2(1H)-one (0.11mmol, 32mg, 31%) as a colorless oil.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.72min; MS m/z (CI) [MH]⁺= 298; ¹H NMR (300MHz, CDCl₃) δ 0.85-1.09 (m, 2H), 1.09-1.32 (m, 3H), 1.53-1.78 (m, 10 5H), 1.78-2.00 (m, 1H), 3.74 (d, J=7.3Hz, 2H), 3.77 (s, 3H), 6.57 (d, J=9.4Hz, 1H), 6.88 (d, J=8.7Hz, 2H), 7.29-7.35 (3H), 7.49 (dd, J=2.7Hz, 9.4Hz, 1H).

EXAMPLE 10 : 1-(4-Chlorobenzyl)-5-((methyl(phenyl)amino)methyl)pyridin-2(1H)-one (Final Compound 3-07)

15

Step 1 : 1-(4-Chlorobenzyl)-6-oxo-1,6-dihydropyridine-3-carbaldehyde

According to Scheme 2: The title compound was prepared from 6-methoxynicotinaldehyde (1eq, 13.4mmol, 1.83g) and 4-chloro-benzylbromide (2eq, 26.8mmol, 5.50g) according to the procedure described for Example 6 Step 2. Reaction 20 conditions: 17 hours under reflux. The crude product was purified by silica gel chromatography (AIT Flashsmart prepacked column 25g SiO₂) using CH₂Cl₂/AcOEt 95/5 as eluent to afford 1-(4-chlorobenzyl)-6-oxo-1,6-dihydropyridine-3-carbaldehyde (9.08mmol, 2.25g, 68%) as an orange solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.51min; MS m/z (CI) [MH]⁺= 25 248.

Step 2 : 1-(4-Chlorobenzyl)-5-((methyl(phenyl)amino)methyl)pyridin-2(1H)-one

According to Scheme 7 Method A: A solution of N-methylbenzenamine (1eq, 0.40mmol, 0.04mL) and 1-(4-chlorobenzyl)-6-oxo-1,6-dihydropyridine-3-carbaldehyde

- (1eq, 0.40mmol, 0.10g) in CH₂Cl₂ (8mL) was stirred for 10 min. at room temperature then AcOH (1eq, 0.40mmol, 0.02mL) and NaBH(OAc)₃ (1.5eq, 0.60mmol, 0.10g) were added. The reaction mixture was stirred 3 hours at room temperature, was quenched with water and the aqueous phase was extracted with CH₂Cl₂. The organic layer was 5 dried over Na₂SO₄, filtered and evaporated. The crude product was purified by silica gel chromatography (AIT Flashsmart prepacked column 25g SiO₂) using CH₂Cl₂/MeOH 95/5 followed by crystallization in pentane/diisopropyl ether to afford 1-(4-chlorobenzyl)-5-((methyl(phenyl)amino)methyl)pyridin-2(1H)-one (0.12mmol, 0.04g, 29%) as a white solid.
- 10 M.p.: 106°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.43min; MS *m/z* (CI) [MH]⁺ = 339, 341; ¹H NMR (500MHz, DMSO-d⁶) δ 2.88 (s, 3H), 4.25 (s, 2H), 5.03 (s, 2H), 6.37 (d, J=9.3Hz, 1H), 6.61-6.66 (m, 1H), 6.75 (dd, J=0.9Hz and 8.8Hz, 2H), 7.11-7.17 (m, 2H), 7.21-7.25 (m, 2H), 7.30 (dd, J=2.6Hz and 9.3Hz, 1H), 7.33-7.38 (m, 2H), 7.67 (d, J=2.0Hz, 1H).

15

EXAMPLE 11 : 1-(4-Chlorobenzyl)-5-(3-methoxybenzoyl)pyridin-2(1H)-one (Final Compound 3-12)

According to Scheme 7 Method C: 1-(4-Chlorobenzyl)-5-(hydroxy(3-methoxyphenyl)-20 methyl)pyridin-2(1H)-one (1eq, 0.28mmol, 0.10g, Example 41) and manganese dioxide (30eq, 8.43mmol, 0.73g) were stirred overnight at room temperature in CH₂Cl₂ (10mL). Upon completion, the crude mixture was filtered through a pad of celite and the filtrate was concentrated. The crude residue was partitioned between water and CH₂Cl₂. The aqueous layer was extracted with CH₂Cl₂. The combined organic layers 25 were washed with brine, dried over MgSO₄ and concentrated under vacuum to afford the title compound as a white solid (0.28mmol, 0.10g, 100%).

M.p.: 104°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.41 min; MS *m/z* ES⁺ = 354, 356; ¹H NMR (500MHz, CDCl₃) δ 3.83 (s, 3H), 5.13 (s, 2H), 6.65 (d,

J=9.6Hz, 1H), 7.11-7.17 (3H), 7.26-7.29 (m, 2H), 7.33-7.39 (3H), 7.89 (dd, J=2.6Hz and 9.6Hz, 1H), 7.97 (d, J=2.6Hz, 1H).

**EXAMPLE 12 : 5-(3-Methoxybenzyl)-1-(4-chlorobenzyl)pyridin-2(1*H*)-one (Final
5 Compound 3-02)**

According to Scheme 7 Method D: Triethylsilane (3eq, 0.84mmol, 0.10g) was added to a solution of 1-(4-chlorobenzyl)-5-(hydroxy(3-methoxyphenyl)methyl)pyridin-2(1*H*)-one (1eq, 0.28mmol, 0.10g, Example 41) in TFA (2mL). The mixture was stirred 1 hour at room temperature. Upon completion, MeOH was added and the solution was evaporated. The crude residue was partitioned between water and CH₂Cl₂. The aqueous layer was extracted with CH₂Cl₂. The combined organic layers were successively washed with brine, dried over MgSO₄ and concentrated under vacuum to afford the crude product. Purification by flash chromatography (AIT Flashsmart prepacked column 10g SiO₂) (CH₂Cl₂/AcOEt 95/5 to 90/10) of the crude product afford the title compound 5-(3-methoxybenzyl)-1-(4-chlorobenzyl)pyridin-2(1*H*)-one (0.20mmol, 0.07g, 71%) as a yellow oil.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.49 min; MS m/z ES⁺ = 340, 342; ¹H NMR (500MHz, CDCl₃) δ 3.65 (s, 2H), 3.78 (s, 3H), 5.08 (s, 2H), 6.57 (d, J=9.3Hz, 1H), 6.63-6.66 (m, 1H), 6.70-6.73 (m, 1H), 6.76-6.80 (m, 1H), 7.02 (d, J=1.9Hz, 1H), 7.18 (dd, J=2.5Hz and 9.3Hz, 1H), 7.21-7.25 (3H), 7.32 (d, J=8.5Hz, 2H).

EXAMPLE 13 : 5-(3-Methoxyphenethyl)-1-(4-chloro-3-fluorobenzyl)pyridin-2(1*H*)-one (Final Compound 7-06)

Step 1 : 5-(3-Methoxyphenethyl)-2-methoxypyridine

- 5 According to Scheme 8 Step 1: Et₃N (15eq, 12.0mmol, 1.68mL), PdCl₂(PPh₃)₂ (0.05eq, 0.04mmol, 17.5mg), PPh₃ (0.2eq, 0.16mmol, 41.8mg) and 5-bromo-2-methoxypyridine (1eq, 0.80mmol, 0.15g) were added to a stirred solution of copper iodide (0.05eq, 0.04mmol, 7.6mg) in DMF (8mL). Then 1-ethynyl-3-methoxybenzene (1.1eq, 0.88mmol, 0.12g) was added and the mixture was heated under microwaves (120°C/25min) and was stirred overnight at room temperature. The resulting solution was poured onto water and extracted with AcOEt. The combined organic layers were dried over MgSO₄, filtered and evaporated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 25g SiO₂) using pentane/Et₂O 98/2 as eluent to afford 5-(3-methoxyphenethyl)-2-methoxypyridine (0.64mmol, 154mg, 81%) as a colorless oil.
- 10 LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 5.13 min; MS *m/z* ES⁺ = 240.
- 15

Step 2 : 2-Methoxy-5-(2-(3-methoxyphenyl)ethyl)pyridine

- According to Scheme 8 Step 2: A suspension of 5-(3-methoxyphenethyl)-2-methoxypyridine (1eq, 0.64mmol, 154mg) and Pd/C (15mg) in MeOH (10mL) was stirred overnight at room temperature under H₂ at atmospheric pressure. The resulting mixture was then filtered on a pad of celite and washed with MeOH. The filtrate was concentrated under reduced pressure to afford 2-methoxy-5-(2-(3-methoxyphenyl)ethyl)pyridine (0.49mmol, 0.12g, 77%) as a colorless oil.
- 25 LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.66 min; MS *m/z* ES⁺ = 244.

Step 3 : 5-(3-Methoxyphenethyl)-1-(4-chloro-3-fluorobenzyl)pyridin-2(1H)-one

According to Scheme 8 Step 3: The title compound was prepared from 2-methoxy-5-(2-(3-methoxyphenyl)ethyl)pyridine (1eq, 0.25mmol, 0.06g) and 4-chloro-3-fluorobenzylbromide (2eq, 0.49mmol, 0.11g) according to the procedure described for

5 Example 6 Step 2. Reaction conditions: 12 hours at 100°C. The resulting dark brown oil was purified by flash chromatography (AIT Flashsmart prepakced column 25g SiO₂, CH₂Cl₂/MeOH 98/2) to afford 5-(3-methoxyphenethyl)-1-(4-chloro-3-fluorobenzyl)pyridin-2(1H)-one (0.14mmol, 55.0mg, 60%) as a yellow oil.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.68 min; MS m/z ES⁺ = 372, 374;

10 ¹H NMR (500MHz, CDCl₃) δ 2.65 (t, J=7.4Hz, 2H), 2.79 (t, J=7.4Hz, 2H), 3.76 (s, 3H), 4.98 (s, 2H), 6.59 (d, J=9.2Hz, 1H), 6.60-6.65 (2H), 6.72-6.75 (m, 1H), 6.79-6.82 (m, 1H), 6.90-6.94 (m, 1H), 6.99 (d, J=2.0Hz and 9.6Hz, 1H), 7.13-7.18 (m, 1H), 7.23 (dd, J=2.5Hz and 9.2Hz, 1H), 7.31-7.36 (m, 1H).

15 **EXAMPLE 14 : N-(3-Chlorobenzyl)-2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)-N-methylacetamide (Final Compound 5-24)**

Step 1 : Ethyl 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetate

According to Scheme 9 Step 1: The title compound was prepared from 5-(4-methoxyphenyl)pyridin-2(1H)-one (1eq, 3.73mmol, 0.75g, Example7 Step 1) and ethylbromoacetate (1.2eq, 4.47mmol, 0.50mL) according to the procedure described for Example 1 Step 2. The reaction was stirred at 60°C for 12 hours. The reaction was filtered and concentrated under reduced pressure to yield a yellow oil. The product was triturated from diisopropyl ether to afford ethyl 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetate (3.38mmol, 0.97g, 91%) as a white solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.53min; MS m/z (CI) [MH]⁺ = 288.

Step 2 : 2-(5-(4-Methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetic acid

According to Scheme 9 Step 2: To a solution of ethyl 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetate (1eq, 3.38mmol, 0.97g) in water/EtOH (1:1, 20mL) at 0°C was added lithium hydroxide (10eq, 33.8mmol, 1.44g). The reaction was then allowed 5 to warm to room temperature and stirred for 2 hours. The reaction was then cooled to 0°C and acidified with HCl 1M solution till pH=2. The resulting precipitate was filtered under reduced pressure to yield 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetic acid (2.56mmol, 0.66g, 76%) as a white solid.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 2.89min; MS m/z (CI) [MH]⁺= 10 260.

Step 3 : N-(3-Chlorobenzyl)-2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)-N-methylacetamide

According to Scheme 9 Step 3: To a solution of (3-chlorophenyl)-N-methylmethanamine (1eq, 0.19mmol, 0.03g), 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)acetic acid (1eq, 0.19mmol, 0.05g) and hydroxybenzotriazole (1.1eq, 0.21mmol, 0.03g) in CH₂Cl₂ (2mL) at room temperature was added EDCI.HCl (1.5eq, 0.29mmol, 55mg). The reaction was stirred at room temperature for 12 hours then diluted with AcOEt. The reaction was washed with brine and the organic phase 20 extracted (x3). The combined organic fractions were dried (Na₂SO₄), filtered and concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 10g SiO₂) using CH₂Cl₂/AcOEt (50/50) as eluent to afford the N-(3-chlorobenzyl)-2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2H)-yl)-N-methylacetamide (0.11mmol, 44mg, 57%) 25 as a yellow oil.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.06min; MS m/z (CI) [MH]⁺= 397, 399; ¹H NMR (500MHz, CDCl₃) mixture 2:1 of isomers δ 2.79 (s, 3Hb), 3.05 (s, 3Ha), 3.77 (s, 3Ha, 3Hb), 4.54 (s, 2Ha), 4.70 (s, 2Hb), 4.93 (s, 2Hb), 4.93 (s, 2Ha), 6.47 (d, J=9.5Hz, 1Hb), 6.49 (d, J=9.5Hz, 1Ha), 7.00 (d, J=8.5Hz, 2Ha, 2Hb), 7.23 (d, 30 J=7.6Hz, 1Ha), 7.30-7.35 (m, 2Ha, 2Hb), 7.35-7.41 (m, 1Ha, 2Hb), 7.41-7.51 (m, 2Ha, 2Hb), 7.82 (dd, J=2.8Hz and 9.5Hz, 1Ha, 1Hb), 7.96 (d, J=2.5Hz, 1Ha), 7.98 (d, J=2.5Hz, 1Hb).

EXAMPLE 15 : 1-((5-Fluorobenzo[d]oxazol-2-yl)methyl)-5-(4-methoxyphenyl)-pyridin-2(1*H*)-one (Final Compound 4-51)

5

According to Scheme 10 Method A: A solution of PPh_3 (3eq, 1.04mmol, 0.27g) in 1:1 acetonitrile/pyridine (3mL) was added dropwise over a period of 1 hour to a mixture of 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(*H*)-yl)acetic acid (1eq, 0.35mmol, 0.09g, Example 14 Step 2), 2-amino-4-fluorophenol (1eq, 0.35mmol, 0.04g), Et_3N (3eq, 10 1.04mmol, 0.15mL) and CCl_4 (4eq, 1.39mmol, 0.13mL) in 1:1 mixture of acetonitrile/pyridine (3mL). The reaction mixture was stirred at room temperature for 2 days. The solvent was removed under reduced pressure and the residue was dissolved in CH_2Cl_2 and NH_4OH . The aqueous phase was extracted 3 times with CH_2Cl_2 . The combined organic fractions were washed with brine, dried over Na_2SO_4 , filtered and 15 concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepacked column 15g SiO_2) using $\text{CH}_2\text{Cl}_2/\text{AcOEt}$ 90/10 as eluent to afford 1-((5-fluorobenzo[d]oxazol-2-yl)methyl)-5-(4-methoxyphenyl)pyridin-2(1*H*)-one (0.06mmol, 0.02g, 16%) as a brown solid. M.p.:115°C; $R_f = 0.21$ ($\text{CH}_2\text{Cl}_2/\text{AcOEt}$ 90/10); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm 20 Column): RT = 4.06min; MS m/z (CI) $[\text{MH}]^+ = 351$; ^1H NMR (500MHz, CDCl_3) δ 3.84 (s, 3H), 5.46 (s, 2H), 6.74 (d, $J=9.5\text{Hz}$, 1H), 6.96 (d, $J=8.8\text{Hz}$, 2H), 7.05-7.12 (m, 1H), 7.35 (d, $J=8.8\text{Hz}$, 2H), 7.40 (dd, $J=8.3\text{Hz}$ and 2.6Hz , 1H), 7.46 (dd, $J=9.1\text{Hz}$ and 4.2Hz , 1H), 7.58 (d, $J=2.6\text{Hz}$, 1H), 7.66 (dd, $J=9.5\text{Hz}$ and 2.6Hz , 1H).

EXAMPLE 16 : 1-((3-(4-Fluorophenyl)-1,2,4-oxadiazol-5-yl)methyl)-5-(4-methoxyphenyl)pyridin-2(1*H*)-one (Final Compound 4-42)

5 According to Scheme 10 Method B: A mixture of 2-(5-(4-methoxyphenyl)-2-oxopyridin-1(2*H*)-yl)acetic acid (1eq, 0.23mmol, 60mg, Example 14 Step 2), 4-fluorophenylamidoxime (1.2eq, 0.28mmol, 43mg), 1-hydroxybenzotriazole (1eq, 0.23mmol, 35mg), EDCI.HCl (1.5eq, 0.35mmol, 67mg) in dioxane (2mL) was stirred at room temperature for 12 hours, then heated at 100°C for 3 days. The solution was
10 poured onto brine and AcOEt and the aqueous phase was extracted twice with AcOEt. The combined organic fractions were washed once with brine, dried over Na₂SO₄, filtered and concentrated under reduced pressure. The crude product was purified by flash chromatography over silica gel (AIT Flashsmart prepakced column 15g SiO₂) using CH₂Cl₂/AcOEt 90/10 as eluent to afford the title compound (0.12mmol, 44mg,
15 50%) as a yellow solid.

M.p.: 123°C; Rf = 0.25 (CH₂Cl₂/AcOEt 90/10); LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.39min; MS m/z (CI) [MH]⁺ = 378; ¹H NMR (500MHz, CDCl₃) δ 3.85 (s, 3H), 5.46 (s, 2H), 6.73 (d, J=9.5Hz, 1H), 6.98 (d, J=8.8Hz, 2H), 7.13-7.18 (m, 2H), 7.36 (d, J=8.8Hz, 2H), 7.53 (d, J=2.3Hz, 1H), 7.68 (dd, J=9.5Hz and 2.3Hz, 1H), 8.05-
20 8.08 (m, 2H).

EXAMPLE 17 : 2-(4-Fluorobenzyl)isoquinolin-1(2*H*)-one (Final Compound 13-01)

According to Scheme 11: To a solution of NaHMDS (2eq, 3.00mmol, 0.50g) in THF
25 (3mL) at 0°C was added isoquinolin-1(2*H*)-one (1eq, 1.00mmol, 0.20g) dissolved in THF (3mL) and DMF (5mL). The reaction mixture was stirred for 10 min at 0°C then cooled at -70°C. The 1-(bromomethyl)-4-fluorobenzene (4eq, 4.00mmol, 0.80g) was added in one portion to the reaction mixture. The reaction mixture was allowed to warm to room

temperature, for one hour. Upon completion the reaction mixture was concentrated under vacuum and the crude residue partitioned between water and AcOEt, the aqueous layer was extracted with AcOEt. The combined organic layers were successively washed with water (2*30mL), HCl (1M, 2*30mL), brine (2*20mL), dried over Na₂SO₄, filtered and 5 evaporated to afford a yellow oil. The crude compound was purified on silica gel using cyclohexane/AcOEt 80/20 as eluent to afford 2-(4-fluorobenzyl)isoquinolin-1(2H)-one as a white solid (0.70mmol, 0.26g, 74%).

M.p.: 107°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 3.76 min; MS *m/z* (CI) [MH]⁺= 254; ¹H NMR (DMSO-d⁶) δ 5.16 (s, 2H), 6.67 (d, J=7.2Hz, 1H), 7.14-10 7.18 (m, 2H), 7.37-7.39 (m, 2H), 7.51 (m, 1H), 7.60 (d, J=7.2 Hz, 1H), 7.66 (m, 1H), 7.71 (m, 1H), 8.23 (m, 1H).

EXAMPLE 18 : 1-(4-Chlorobenzyl)quinolin-2(1*H*)-one (Final Compound 15-04)

15 According to Scheme 12: The title compound was prepared from quinolin-2-ol (1eq, 0.69mmol, 0.10g) and 1-(bromomethyl)-4-chlorobenzene (1.5eq, 1.03mmol, 0.21g) according to the procedure described for Example 1, Step 2. Reaction conditions: 17 hours under reflux. The residue was purified by flash chromatography on silica gel using pure CH₂Cl₂ as eluent to afford 1-(4-chlorobenzyl)quinolin-2(1*H*)-one as a white solid 20 (0.55mmol, 0.15g, 79%).

M.p.: 139°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.40 min; MS *m/z* (CI) [MH]⁺= 270, 272. ¹H NMR (300MHz, CDCl₃) δ 5.52 (s, 2H), 6.80 (d, J=9.5Hz, 1H), 7.13-7.24 (4H), 7.25-7.30 (m, 2H), 7.40-7.48 (m, 1H), 7.58 (dd, J=1.5Hz and 7.9Hz, 1H), 7.75 (d, J=9.5Hz, 1H).

EXAMPLE 19 : 1-(3-Fluorobenzyl)-4-(4-methoxyphenyl)pyridin-2(1H)-one (Final Compound 11-03)

5 *Step 1 : 1-(3-Fluorobenzyl)-4-(3-fluorobenzylxy)pyridin-2(1H)-one*

According to Scheme 13 Step 1: The title compound was prepared from pyridine-2,4-diol (1eq, 2.52mmol, 0.28g) and 1-(bromomethyl)-3-fluorobenzene (3eq, 7.56mmol, 0.93mL) according to the procedure described for Example 1 Step 2. Reaction conditions: 17h under reflux in DMF. The crude product was purified by flash chromatography on silica gel ($\text{CH}_2\text{Cl}_2/\text{AcOEt}$ 90/10) to afford 1-(3-fluorobenzyl)-4-(3-fluorobenzylxy)pyridin-2(1H)-one as a white solid (0.95mmol, 0.29g, 36%).

M.p.: 121°C; LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 4.33 min; MS *m/z* (CI) [MH]⁺ = 328; ¹H NMR (DMSO-d⁶) δ 7.72 (d, 1H, J=7.88 Hz); 7.47-7.42 (m, 1H); 7.40-7.38 (m, 1H); 7.28-7.26 (m, 2H); 7.18 (m, 1H); 7.10-7.07 (m, 3H); 6.08-6.06 (dd, 1H, J=2.8 Hz, J=7.56Hz); 5.93(d, 1H, J=2.83Hz); 5.09(s, 2H); 5.02 (s, 2H).

Step 2 : 1-(3-Fluorobenzyl)-4-hydroxypyridin-2(1H)-one

According to Scheme 13 Step 2: A suspension of 1-(3-fluorobenzyl)-4-(3-fluorobenzylxy)pyridin-2(1H)-one (1eq, 0.95mmol, 0.29g) and Pd/C (0.3eq, 0.29mmol, 30.3mg) in MeOH (3mL) was hydrogenated until complete (30 min). The suspension was filtered through celite and the filtrate concentrated under vacuum to afford 1-(3-fluorobenzyl)-4-hydroxypyridin-2(1H)-one (0.75mmol, 0.16g, 79%) as a white powder.

LC (XTerra RP₁₈, 3.5μm, 3.0x50mm Column): RT = 2.88 min; MS *m/z* (CI) [MH]⁺ = 220.

Step 3 : 1-(3-Fluorobenzyl)-1,2-dihydro-2-oxopyridin-4-yl trifluoromethanesulfonate

According to Scheme 13 Method B: To a solution of 1-(3-fluorobenzyl)-4-hydroxypyridin-2(1H)-one (1eq, 1.00mmol, 0.30g) and pyridine (3eq, 4.00mmol,
